Notifications & Reminders

Evoqed Livestock · Updated 2 November 2026
Full narrative lives in docs/notification-reminders.html. This PDF captures the model and the 2 Nov tank-rule change.

How it works

- Every reminder is an Inbox task created from farm events or scheduled checks.
- Dispatcher delivers due tasks as push; CRITICAL may also SMS and Nepali voice.
- Anti-fatigue: night hold for non-urgent, daily caps, bundling, escalate if unacked.
- Phone keeps local alarms for urgent tasks when offline.

Urgency bands

- CRITICAL — SMS/voice eligible (e.g. calving watch overdue).
- HIGH — push promptly (tank shortfall, expense approval, stock reorder…).
- NORMAL / LOW — can wait for quiet hours bundling.

Tank shortfall (updated 2 Nov 2026)

Previously any tank reading above milked litres also raised TANK_VARIANCE. Now:

- Actual or delivery litres above milked SOLD!' rejected immediately (TANK_
- Actual litres "8% or worse vs milked SOLD!' HIGH task "Tank shortfall ... –
equivalent.
- "2% to "5% short remains normal loss and does not raise a task.
- Task deep-link opens Shed.

Where copy lives

- API task titles: apps/api/src/milk/milk.service.ts (ensureTask for TANK_VARIANCE).
- Web/mobile Inbox labels: i18n tasks.TANK_VARIANCE + milk.varianceHint (EN + NP).
- Rules table: apps/api/src/notifications/notification-rules.ts.
