Evoqed Livestock — Changes 1–2 Nov 2026

Repo: manish3321/Livestock · Live: evoqedlivestockfarm.vercel.app
This note covers Sunday 1 November and Monday 2 November 2026 (Nepal).

1. Sunday 1 Nov — Breeding desk

- 3b956bf — Desk UI for Walk, sheets, Watch, and mobile.
- da3c720 — Mobile breeding desk mirror for Watch, Herd, and sheets.

Breeding on web and phone now shares the same mental model: Watch for planning, Walk for today's work, Herd for KPIs (managers+). Heat / service / PD / calving / colostrum sheets were hardened for desk use.

2. Monday 2 Nov morning — Breeding polish

- 13be15f — Harden Watch desk rows; keep tab strip horizontal.
- 94e66ed — Species photo cues and animated Watch / Walk / Herd toggle.
- 7f0df3f / 3d2381c — AnimalPhoto species placeholders on Walk/Watch (emoji match).

3. Monday 2 Nov — OS remaining work (6178123)

Large ship: speed, shed/breeding proofs, offline pagination, batch detail, animal counts, indexes.

Shed performance

- GET /v1/rounds/today and /remaining: one-shot SQL + lean roster (no milk history hydrate).
- Warm samples after fix ~150–200 ms locally (was ~2 s); production uses pooler.
- today() does not call abandonStale; remaining() only round + progress.
- Prisma indexes for milk filter [farmId, type, session, entryDate] and ScanEvent.roundId.
- Evening milking can restart after finish (unlink closed milkRoundId unique clash).

Shed / milk rules

- Typed herd match uses full digit suffix (not endsWith) on API and phone.
- Tank/delivery reject litres above milked SOLD (TANK_ABOVE_MILKED).
- Tank shortfall task only for "8% or worse (not for over-fill).
- STOCK_NEGATIVE on inventory OUT; future heat rejected (HEAT_FUTURE_DATE).

Offline & clients

- Sync bootstrap + mobile module-cache walk pages until short/total (cap 20 pages).
- Batch detail combined endpoint used by web + phone; old routes remain.
- Animal species counts endpoint for picker (web + phone).
- Worker metrics stay 403; Herd tab hidden for WORKER.

4. Monday 2 Nov evening — Production hotfix (cd02ce4)

- Homepage "Something went wrong" — API FUNCTION_INVOCATION_FAILED on Vercel.
- Cause: Prisma preferred DIRECT_URL (session mode) which exhausts Supabase clients in serverless.
- Fix: Vercel/Lambda uses DATABASE_URL pooler; local Nest may still prefer DIRECT_URL.
- Pushed and verified login + /v1/dashboard/summary again.

5. Notifications updated (same day)

- Task titles for TANK_VARIANCE!' "Tank shortfall … — check missing milk"
- Shed varianceHint EN/NP: over-fill rejected; shortfall "8% raises task.
- docs/notification-reminders.html tank row rewritten (2 Nov 2026).

6. Releases

- GitHub main: through cd02ce4.
- EAS preview APK:

https://expo.dev/accounts/evoqed/projects/farm-shed/builds/b5d13630-4643-4732-a78d-6986532eed45

- APK build from 6178123 OS work; redeploy web/API includes cd02ce4 pooler fix.

7. How to verify

- Web Home loads after hard refresh.
- Breeding: owner/manager sees Watch | Walk | Herd; worker sees Watch | Walk only.
- Shed remaining warm < 1 s on local DIRECT_URL.
- Tank save above milked !' 400 TANK_ABOVE_MILKED.

— End of 1–2 Nov summary —
