Kharka Farm OS — Breeding timing

Date: Tuesday 28 October 2026 (Nepal)
Repo: manish3321/Livestock · Live: evoqedlivestockfarm.vercel.app
Scope: clearer Walk vs Watch timing, colostrum urgency, next-step toasts, faster breeding board API.
Uncommitted local changes (not pushed).

1. Problem

Watch and Walk both felt like “status lists.” Overdue wording stacked, colostrum sat inside a mixed post-calving bucket, and after saving heat/service/PD/calving the UI did not say what to do next.

2. Walk board (today’s timed work)

- New COLOSTRUM group — right after Breed today — for COLOSTRUM_FEED only.
- Late items append a single “late / "?2K” marker; no stacked overdue copy
- Colostrum context uses hours after birth; breed window still shows clock deadline.
- Walk row “Record colostrum” opens the colostrum form directly.

3. Watch board (cycle status)

- Removed duplicate “overdue” suffix next to the countdown label.
- Help text points timed work (breed window, colostrum) to Walk.
- Primary CTA is stage-aware: Log heat / Breed now / PD / Calving / Colostrum.

4. After-save next steps

- Heat !’ next: breed in 12–18h window (Walk !’ Breed today).
- Service !’ next: pregnancy check on due day (Walk).
- PD !’ Watch shows dry-off and calving countdowns.
- Calving !’ next: colostrum within 2 hours (Walk !’ Colostrum).
- Colostrum !’ postpartum checks remain on Walk.
- English and Nepali toast strings updated together.

5. Mobile alignment

- WalkKind “colostrum” split out; order matches web: breed !’ colostrum !’ he
- SYNC_AI included in breed-today; dedicated Colostrum primary button.

6. API speed (GET breeding board)

- Species configs for all species on the board prefetch in parallel with sync enrollments.
- taskMetadata made synchronous (no await in the per-task loop).
- No change to bootstrap page size, batch detail, animal-picker counts, or sync protocol.

7. Tests

- breeding-board.test.ts: COLOSTRUM group order + RECORD_COLOSTRUM action.
- Late marker appears once on overdue Walk items.

8. Files touched

- packages/contracts — BOARD_GROUP_KEYS includes COLOSTRUM.
- apps/api — breeding-board.ts, breeding-board.service.ts, breeding-board.test.ts.
- apps/web — BreedingBoard, BreedingWatch, en/ne i18n.
- apps/mobile — breeding-groups.ts, BreedingScreen, en/ne i18n.

9. How to verify

- Open Walk: Colostrum section appears for fresh calves; late items say “late” once.
- Open Watch: countdown only; CTA matches next form.
- Save heat !’ toast points at breed window; save calving !’ toast points at c

- Mobile Walk shows Colostrum as its own section.
