Kharka Farm OS — Breeding timing (full)

Date: Thursday 30 October 2026 (Nepal)
Repo: manish3321/Livestock · Live: evoqedlivestockfarm.vercel.app
Scope: full Watch / Walk / Herd timing direction. Tabs unchanged. Local changes not pushed.

One farmer rule

- Walk = today's work only (Nepal calendar day: overdue + due today).
- Watch = planning / status (this week, next heat, days to calving).
- Herd = managers (KPIs + history).
- Same rule on phone and web. Mobile Walk now prefers GET /v1/breeding/board.

1–2. Human timing on every Walk row

- Each row: Do by · Why · one late consequence (e.g. "window closing").
- No stacked overdue labels. Contracts: doBy*/why*/late*/urgency on BoardItemDto.
- Quiet-day cap: HEAT_WATCH preferred over SILENT_HEAT_CHECK for the same animal.

3. Next action after every save

- Banner: Saved !' next is X !' Due Y, with a large Open next button.
- Heat !' service window · Service !' PD day · PD !' Watch countdowns · Calvi
Colostrum !' postpartum on Walk.

4. Service window = one mental model

- Watch IN_HEAT shows "Walk owns this · window closes {clock}".
- Breed now / Open on Walk switches to Walk tab with the service form.

5. Colostrum timed Walk group

- Own COLOSTRUM group. Green "d2h, amber 2–6h, red >6h (row urgency +

6. Mobile = web Walk

- Phone loads the same board DTO: groups, technician call, injection, dry-off, manager decisions.
- Offline fallback still uses local task grouping (today-only, not tomorrow).

7. Softer voluntary wait

- Heat in VWP: choose Observation only (no breed window) or Confirm real heat.
- Service in VWP: confirm "Serve anyway" before the pregnancy chain fires.

API speed

- Board still prefetches species configs + enrollments in parallel; taskMetadata is sync.

Verify (tested 30 Oct 2026)

- API board/watch unit tests + mobile breeding-board-walk.test.ts (2/2).
- Live Walk: COLOSTRUM Why 1h GREEN / 4h AMBER / 8h RED; group colour RED (worst).
- VWP Serve anyway: B01 !' confirm !' service write UI-VWP-SERVE-ANYWAY
- Mobile Walk prefers GET /v1/breeding/board (no physical device this session).
- Smoke script smoke-breeding-remaining.mjs: colostrum G/A/R + VWP service + board contract.

— End —
