In one paragraph. Yesterday was about making the daily shed work quicker and clearer for workers, on the phone and on the website. The Shed page now shows **which animals are not done yet**. Scanning an animal's QR asks **what you want to record: Milk, Vaccine or Breeding**. The home screen has a **Today's work** list (late, today, tomorrow), which was then made **bigger and simpler**, with one short, standard label per job in English and Nepali. **Animal pictures** now appear on the livestock, batch, poultry and fish screens. Two bugs were fixed: an **old milking round from 25 September** that took over the Shed page, and the **"152 left" counter flickering** on the phone.

1. Shed: "Not done yet" list

- When no round is running, the Shed page shows today's session for the chosen work (for example morning milking): progress such as "19 of 35 done", and every animal still waiting.
- Waiting animals are shown in **light red** with their photo, so they stand out. Tapping one starts the round and opens that animal straight away.
- The phone keeps a copy of the list, so it still shows when offline.
- New API endpoint: `GET /v1/rounds/today?mode=…&session=…`.
- Available on the phone and on the website.

2. Scan QR: choose what to record

- After scanning an animal's QR code, or picking it by hand, a dialog shows the animal's photo, number, name and pen.
- It then asks one question: **Milk**, **Vaccine** or **Breeding**. Breeding opens a second choice: heat, service, pregnancy check or calving.
- "Other records" still gives access to every other form (weight, treatment and so on).
- Each choice only appears for people whose role is allowed to record it.
- On the website, the Scan page's text search opens the same dialog when it finds one exact match, or shows a list with photos when several animals match.

3. Today's work

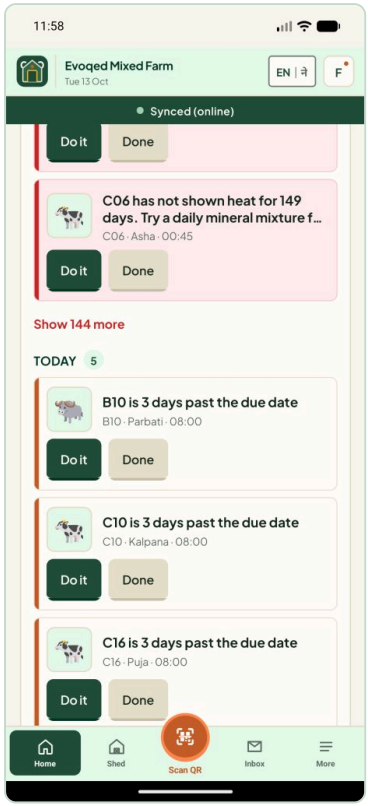

The home screen of the app and the website dashboard now start with the worker's list for the day, so nothing has to be remembered:

- Three groups: **Late — do these first** (light red), **Today** and **Tomorrow**.
- Jobs assigned to the signed-in person come first and are marked **For you**.
- **Do it** opens the right form with the animal already filled in. **Done** ticks the job off. Band jobs can only be completed by scanning.
- Long groups are shortened, with a "Show more" link.

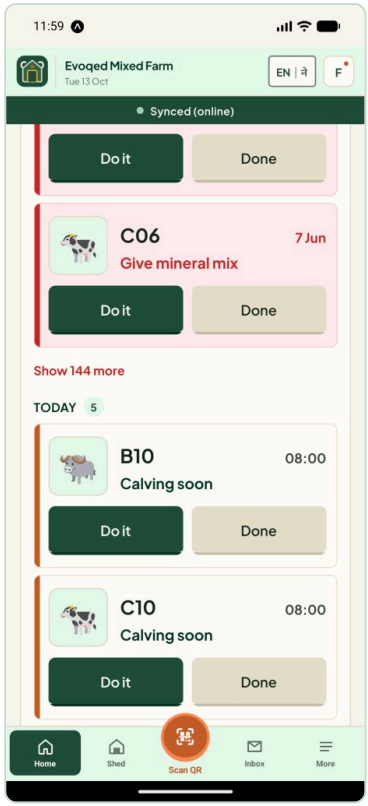

Bigger, simpler rows (afternoon change)

Each job used to show the long sentence written by the reminder system, for example "C10 is 3 days past the due date". Each row now shows:

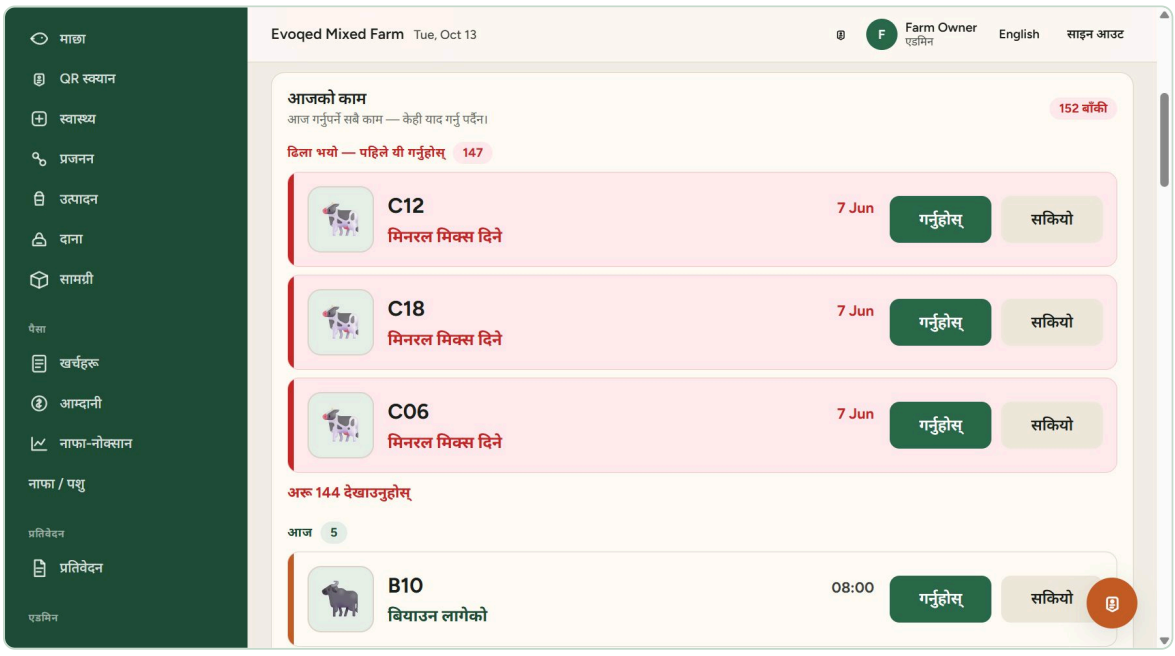

- The **animal number in big text** and a bigger picture.
- **One short standard label** for the type of job, such as *Calving soon* (बियाउन लागेको), *Give vaccine* (खोप दिने), *Watch for heat* (रजस्वला हेर्ने), *Pregnancy check* (गर्भ जाँच) or *Dry off* (सुकाउने). All 35 job types have an English and a Nepali label, using the words the app already uses.
- The **time** on the right. For late jobs, the **date** it was due ("7 Jun") instead of a time that doesn't say which day.
- **Bigger Do it / Done buttons.** On the phone they fill the width of the row.

Phone, before: long sentences and small buttons.

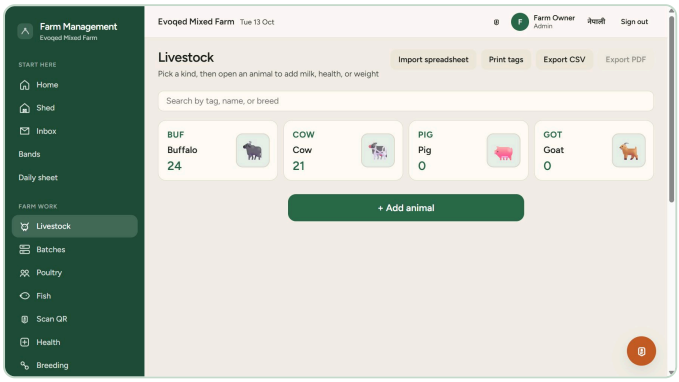

Phone, after: animal number, short label, time, big buttons.

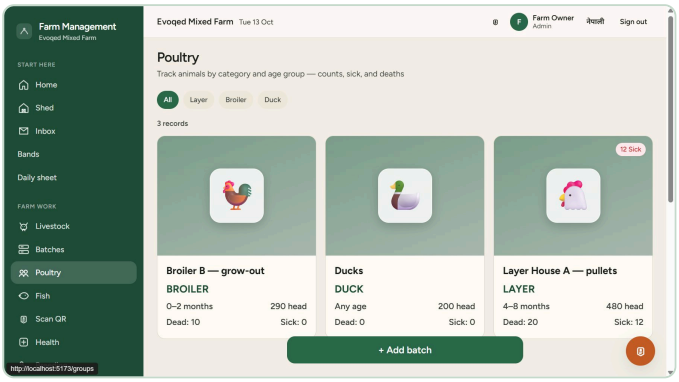

Website dashboard in Nepali: late jobs show the due date, today's jobs show the time.

4. Animal pictures everywhere

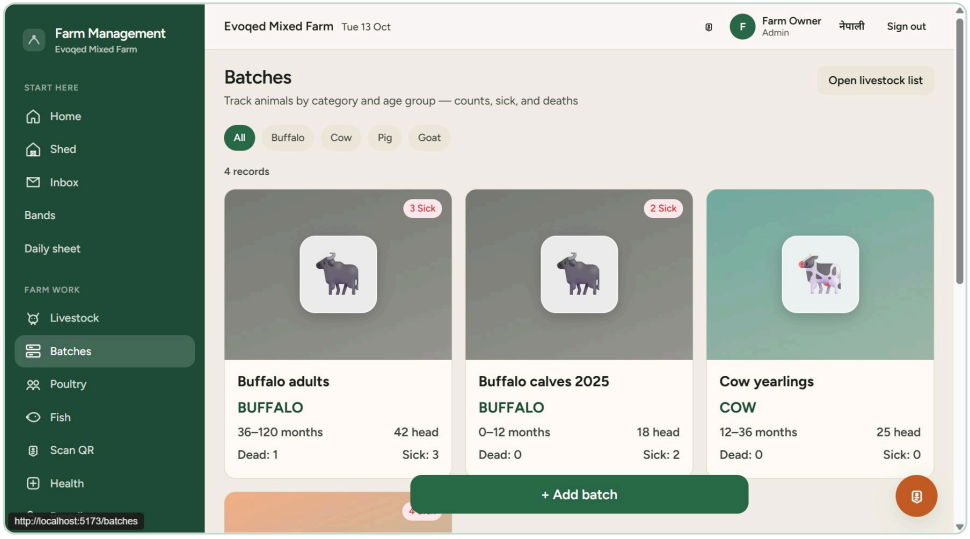

- **Livestock:** each species card (Buffalo, Cow, Pig, Goat) shows its picture, and each row in the herd list shows the animal's own photo, or the species picture if no photo was uploaded.
- **Batches, Poultry and Fish:** each card shows a large picture: buffalo or cow for livestock batches; chicken, rooster or duck for layer, broiler and duck flocks; a fish for Rohu, Catla and other ponds. The red "Sick" badge stays on top.
- The same pictures are used on the phone and the website, including in the scan dialog, the Shed list and Today's work.

Livestock: species cards with pictures.

Poultry: broiler, duck and layer flocks.

Batches: livestock groups, with the sick count still shown.

5. Bugs fixed

An old milking round took over the Shed page

A morning milking round from **25 September** (19 of 35 milked) was never finished. Because it was still "active", the Shed page always reopened it instead of showing today's list.

- The API now closes ("abandons") any round still open from before yesterday, and records this in the audit log. Yesterday's round is kept, because a Nepal morning starts before midnight UTC.
- The website and the phone also ignore an old saved round.
- The live database was cleaned: the old rounds were closed and today's morning list showed 0 of 35 done.

The "152 left" counter kept flickering on the phone

Every background sync (saving data, caching photos) reloaded Today's work and showed a spinner in place of the counter. Now the list refreshes when the screen opens, and at most every 30 seconds in the background without a

spinner. On the emulator the counter stayed steady for the whole test.

6. Quality checks

Check	Result
Typecheck (all packages)	**PASS**
Tests	**318 PASS** API 252 · web 30 · mobile 20 · contracts 16
Lint	**0 ERRORS** 8 older warnings in other web pages; none in the new files
Checked by hand	Website in the browser (English and Nepali) and the app on the Android emulator

New API tests cover the "not done yet" list and closing old rounds.

7. Commits

Commit	Time	What it contains
`53d7175`	09:30	Phone: Shed "not done yet" list, scan choice dialog, Today's work, animal photos; API `/v1/rounds/today`
`e165c1e`	09:45	Website: the same four features
`91b13a1`	09:54	Close milking rounds left open from an earlier day
`194a16a`	10:09	Phone: stop the counter flicker; pictures on livestock, batches, poultry and fish
`24ac6ab`	10:45	Website: pictures on livestock, batches, poultry and fish
`4ae3858`	11:59	Today's work: bigger rows, short standard labels, date for late work

8. Still to do

Status	Task
TO DO	Build a new Android app so phones get these changes: `cd apps\mobile; eas build -p android --profile preview`. The website is already live.
TO DO	In Vercel, add `SPARROW_SMS_TOKEN`, `SPARROW_SMS_FROM`, `FCM_SERVICE_ACCOUNT_JSON`, `NOTIFICATION_CRON_SECRET` and `CRON_SECRET`, then redeploy.
TO DO	In GitHub, add the secrets `API_BASE_URL` and `NOTIFICATION_CRON_SECRET` and the variable `ENABLE_NOTIFICATION_CRON=true`.
TO DO	Rotate the Firebase (FCM) private key, because it was shared in chat.

Found afterwards (14 Oct). Today's work showed 147 late jobs, some from June. The cause: on Vercel the nightly job that expires old jobs and closes repeated reminder steps never ran. It now has a trigger (Vercel Cron, once the secrets above are set). It was run once by hand: 100 old jobs expired and 20 repeated reminders were closed.
